

**ROGUE  
ASCENT  
VR**

The logo for 'Rogue Ascent VR' is positioned in the lower-left corner. It features the word 'ROGUE' in a blue, blocky font with a yellow and blue target icon replacing the letter 'O'. Below it, 'ASCENT' is written in a purple, blocky font. At the bottom, 'VR' is written in a smaller, blue, blocky font. The entire logo is set against a dark, stylized background.

# OVERVIEW

**Rogue Ascent sets the bar for hand-tracked content on the Meta Quest and brings the Roguelike genre to the fingertips of VR players**

Jordan McGraw began development on Rogue Ascent in late 2020 as the COVID-19 pandemic continued. After toying with the Quest hand-tracking technology, Jordan found huge potential to utilize and extend the potential of hand-tracking. Building from the ground up, Rogue Ascent has always been made with hand-tracking as not only the main control scheme – but the preferred. In order to make Rogue Ascent a success in Jordan's mind, he had to make hand-tracking a success. In doing so, Rogue Ascent has become the most ambitious game in scope, style, gameplay, and accessibility using hand-tracking.

## Hand Tracking

# THE TEAM

Rogue Ascent began as a lone project from Jordan McGraw under his studio Nooner Bear. After half a year of development, Clique Games began talks to publish Rogue Ascent under its VR portfolio along with 2 previous Nooner Bear studio titles. After signing, Brandon Egolf and Waylon Fisher took an active role in helping Jordan design, streamline, and enhance Rogue Ascent using their VR Arcade experience. As a team, they've brought Rogue Ascent to a successful Kickstarter and thousands of downloads.

## ABOUT

Rogue Ascent VR turns your childhood imagination of finger guns being epic weapons into a reality! With carefully optimized and seamless Hand-Tracking, Rogue Ascent makes you feel like an absolute renegade on the battlefield.

Combat is intense and intuitive. You'll feel the rush immediately as your hands quickly learn the simple gestures that guide Rogue Ascent. Dash past enemies with an outstretched hand and quickly turn that hand into a shotgun to finish the job. And when you get spotted? Just block your face and you'll be safe.

# FEATURES

## HAND-TRACKING

Rogue Ascent will be the standard to which future hand-tracked titles must compare. Fast & intuitive tracking, quick gesture recognition, complex gesture recognition, and unique hand-to-object interactions will create a never before realized method of game controls.

## PERKS, ABILITIES

The full roguelike experience will feature multiple characters with wildly diverse ways of play. New perks will allow every run to be unique as they're randomly found during play & change everything from your gun's stats to your hand's usability. Abilities will let each character have strengths & weaknesses.

## FEATURE EXAMPLE

We removed this feature description from the pitch deck because we want to keep it secret when it releases. I will now keep typing in this section to fill out the space so it looks like all the other ones. Be sure to buy Rogue Ascent if you are reading this.

## GAMEMODES

Take on enemies while holding a floor for as long as possible or attempt a run with limited movement. Multiple gamemodes (both big and small) will give players more challenges & replayability as they tackle the game with exciting twists & buffs that let them make their own fun.

## ART, ENVIRONMENT

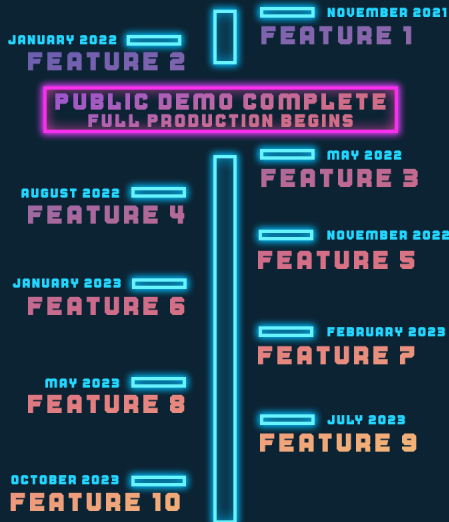

With an already distinct and bold art direction, Rogue Ascent's style of retrowave / synthwave will receive major overhauls. Custom asset creation, custom environments per floor, character / enemy redesigns and more are coming to keep Rogue Ascent unique from any other game on the market.

## EVENTS, PUZZLES

As a player ascends through the enemy spaceship there will be multiple events that can randomly occur. Explore a lost vault filled with rustic loot or dump a massive vat of toxins across the floor. Hack into the security system with puzzle minigames, or escape a floor by re-wiring a glitchy door.
